

SpeakEasy®

Hands Free Digital PA System

Clever Devices designs and develops breakthrough solutions for transit systems that are proven to increase efficiency and reduce operation costs while improving the passenger experience.

When a driver must make an announcement using a handheld microphone, they may briefly take their hands off the steering wheel and their eyes off the road. This distraction can lead to increased accidents and safety concerns. With **SpeakEasy®** drivers can make hands-free, crystal clear route and stop announcements while remaining focused on the safe operation of the vehicle and the road ahead.

Hands-Free Announcements

The rugged, hands free digital microphone is installed in the driver's cab and activated by a foot switch on the floor enabling the driver to easily make manual route and stop announcements without ever having to take his or her hands off the wheel.

Record Automated External Announcements

The operator can record messages up to 30 seconds in length that can be programmed to play only to the external speakers whenever the front door opens. For instance, the driver can record an announcement indicating the bus number or route and set this to play each time the bus arrives at a stop. This is particularly useful for those who may be visually impaired and supports compliance with ADA regulations. Automated announcements can easily be disabled with a simple touch of the exterior mute button on the unit.

Excellent Audio Quality

Internal and external speakers and a carefully placed directional microphone provide crystal clear announcements inside and outside the vehicle. Background noises are suppressed using noise cancellation technology to ensure passengers can hear regardless of sounds on the bus or on the street.

Rugged Design Ensures Reliability

SpeakEasy® is purpose built to meet the demanding needs of transit. The digital microphone is encased in a high-impact polymer and all wiring is contained inside the enclosure. The durable internal speakers are designed to endure the rigors of their environment and outdoor speakers are enclosed and built to withstand exposure to the elements.

With SpeakEasy® drivers can make hands-free, crystal clear route and stop announcements while remaining focused on the safe operation of the vehicle and the road ahead.

Clear stop announcements while keeping safe

Make hands-free, crystal clear announcements while staying focused on safe operations and the road ahead. With durable internal speakers designed to endure the rigors of their environment and outdoor speakers are enclosed and built to withstand exposure to the elements.

Secure Bus Access Unauthorized Vehicle Protection

Unauthorized operation of buses can be a problem for the transit industry. In the wrong hands, a bus can be a tool for a reckless joyride, retaliation from a disgruntled ex-employee or used as a weapon of destruction. It is imperative that the use of buses be restricted to only trained and trusted operators.

AVA® Automatic Voice Annunciation Systems

Clever Devices AVA® system complies with the Americans with Disability Act (ADA) and Accessibility for Ontarians with Disabilities Act (AODA). AVA features include volume control and voice modulation, which automatically adjust announcements so they can be heard over people talking inside the bus as well as over street noises outside.

CleverCAD® Computer-Aided Dispatch

CleverCAD (Computer-Aided Dispatch) is a sophisticated technology solution that delivers greater efficiency and security to transit operations by providing dispatchers and supervisors with a clear, real-time picture of the location and status of every in-service vehicle.
